

FOR IMMEDIATE RELEASE

Auto Failure Prediction Analysis - VECR (Vehicle Electronic Condition Report) System 2.0

AUSTIN, TEXAS – January 1st, 2014 – Auto e-Diag Services, an engineering company specializing in electronic failure prediction, data analysis, announces the release of VECR 2.0 for the Windows platform. VECR system is a new automotive breakthrough product Powered by DearBorn's scan tool technology. VECR 2.0 has been field tested and proven in Auto Auction volume testing environment.

Other important features include:

- Performs a complete vehicle diagnostic test which includes fault codes, component information, total truck and dynamic truck data in about 5 minutes.
- Performs automated diagnostics to find and identify problems not seen by “normal diagnostics”
- Volume test control station can operate up to 10 VECR stations to generate a large amount of VECR reports in a short period of time.
- The DPA 5 is RP1210A compliant and should work with any RP1210A compliant application. It has been thoroughly validated against the following OEM and component applications:
 - Allison DOC
 - Bendix ACOM
 - Caterpillar Electronic Technician
 - Cummins Insite
 - Dana Diagnostic Tool
 - Detroit Diesel Diagnostic Link
 - Detroit Diesel Reprogramming Station
 - Eaton ServiceRanger
 - Freightliner ServiceLink
 - International Diamond Logic Builder
 - International InTune
 - International Master Diagnostics
 - International ServiceMaxx
 - Mack VCADS/PTT
 - Meritor-WABCO Toolbox
 - Perkins EST
 - Vansco VMMS

- Volvo VCADS/PTT
